

CLOUD HOSTING

THE SERVERMANIA CLOUD CATALOG

The ServerMania Cloud empowers organizations to deploy reliable, flexible, and scalable servers in seconds.

The ServerMania cloud is engineered to meet the needs of any rapidly evolving business, providing security, redundancy, and scalability to all cloud users.

ServerMania's public and private cloud platforms are easy-to-use for cloud newcomers and powerful enough to satisfy infrastructure experts and DevOps professionals.

WHAT IS

THE SERVERMANIA CLOUD?

The cloud combines powerful enterprise-grade rackmount servers, virtualization technology, innovative control interfaces, and advanced server resource distribution.

To a user, the ServerMania cloud is a platform for quickly deploying powerful virtual machines.

Each virtual machine is a complete server environment with an operating system, root access, and the ability to install software.

Cloud servers can be launched in seconds via ServerMania's elegant web interface or a full-featured API.

Cloud users only pay for the resources they use, making the ServerMania Cloud the ideal platform for variable workloads and rapid scaling.

ServerMania's cloud includes innovative features as standard, including:

Comprehensive server, storage, and backup redundancy

100% Network Uptime SLA

Industry-leading 15-minute response to support tickets

High-performance SSD storage

Instantly Scale Resources

Cloud server users can also take advantage of ServerMania's server management packages, making it even easier to deploy, configure, and manage servers.

The features needed for businesses looking to instantly deploy new servers or scale server resources on the fly. The ServerMania Public Cloud is designed to deliver a complete and easy to use server solution.

Rapid Server Deployment

New Cloud servers can be deployed in seconds using our easy to use control panel. Simply select an OS, choose your plan, and launch the server. It's that simple. New servers can be deployed at any time using our control panel or the powerful Cloud API.

Simple and Easy to Use

Businesses depend on Cloud technology now more than ever. Our goal when designing the ServerMania Cloud was to keep it simple, even for non-experts. Our simple and easy to use control panel gives you access to a comprehensive and full-featured Cloud, without the need for a complicated interface to learn.

Built-In Security

Security is at the forefront of our entire Cloud platform. Precisely control who and how servers can be accessed, Our control panel allows you to restrict access to certain whitelisted IPs, completely lockdown network routes, and much more.

Instantly Scale Resources

Cloud servers can be scaled up at any time based on a surge in demand, so you always have additional resources available when you need it. Add additional CPU, memory, or disk space in just a few clicks so you never have to worry about server downtime as a result of an underpowered server.

Free Migration

For qualified customers, we can assist with migrating content from another Cloud platform. Contact our sales team to learn more about what migration services may be available to you.

Easy to Understand Billing

Only pay for what you use with an easy to understand hourly or monthly billing price for each server. Servers can be scaled up at a moments notice, so you never have to spend more than you need to. With no up-front hardware or staffing costs, the ServerMania Cloud is the perfect option for businesses looking to streamline costs.

Redundancy Across the Board

Each Cloud server is backed by a powerful network of servers, each handling a specific component of the Cloud server process. This self-healing Cloud is designed with redundancy across all critical components to deliver maximum uptime and performance.

CLOUD SERVER

FEATURES

True 24x7 Support

We don't believe in hiding support behind paywalls and confusing control panels. Our support is always available via live chat, phone, and email to assist you 24x7. We have the tools and experience to help guide you to Cloud server success and always respond in 15 minutes or less to any support request.

Server Management Available

For those looking for server management or monitoring, we have a variety of server management options available. Starting at \$39.99/month, we'll monitor your Cloud server 24 hours a day and intervene in the event of an outage.

Choice of OS

When creating a server, choose between a wide range of Linux and Windows operating systems, or load your own custom ISO for complete control over the server operating system setup.

Powerful API

Integrate with third-party applications in order to create new servers, scale resources, or monitor server resource utilization. Our powerful API includes extensive documentation and examples so you can get started easily.

Flexible Automation

Deploy new servers using custom templates, or create your own step-by-step recipes in order to execute specific commands during the server lifecycle. These automations can be leveraged to reduce server management and deployment times.

Reduced Bandwidth Costs

Many Cloud platforms thrive by charging a reasonable server fee, but an outrageously large bandwidth cost as your server grows. Not so with ServerMania. Our bandwidth costs are always reasonable.

Focused Data Privacy

As a leader in web hosting since 2002, we understand how important data privacy and security is to business operations. That's why the ServerMania Cloud is hosted in data centers that exceed all industry best practices in data security and privacy.

Customized Cloud Solutions

For businesses with unique requirements or compliance concerns, our server experts can work with you to craft a custom Public Cloud plan, or a completely unique private Cloud setup for your organization.

The ServerMania Public Cloud is the fastest and most flexible server hosting available.

A glowing blue cube with two white cloud icons inside, resting on a circuit board. The cube is surrounded by a grid of blue lines, and the background is a blurred circuit board.

A Comprehensive API Built In

For companies with smaller server deployments, our cloud web control panel offers an intuitive interface for deploying, configuring, and scaling cloud servers.

For customers with more advanced requirements, the ServerMania public cloud offers a comprehensive API. The API can be used to integrate your public cloud network with existing systems and third-party services, including infrastructure management, monitoring, continuous integration and testing, and automated scaling.

Pre-configured servers range from economical single-core virtual machines with a Gigabyte of RAM and 25 Gigabytes of storage to 24-core powerhouses with 128GB of RAM and 3TB of storage.

For customers who can't find their ideal server in our standard line-up, we're happy to provide custom cloud servers with the perfect specifications.

The ServerMania public cloud empowers businesses to deploy infrastructure that covers the full spectrum of their needs, from small testing servers to massive clusters with dozens of servers that run for multiple years.

A private cloud platform is the best infrastructure solution when security, control, and performance are priorities. Private cloud combines the convenience of cloud servers with the reassurance of hardware dedicated to your organization.

ServerMania private clouds are based on the same cloud technology as our public cloud platform, but only the private cloud's owner can launch virtual servers on the underlying physical hardware.

Private clouds are physically isolated at the network, compute, and storage level, providing privacy, and security for mission critical workloads and sensitive data.

Private cloud platforms are custom-built for individual clients. A dedicated account manager will work with you ,and our team of cloud experts, to engineer the perfect private cloud environment.

In addition to dedicated sever hardware and isolated network infrastructure, private cloud users benefit from custom network security that includes full access to a hardware firewall with custom rules. Private cloud users can also create private network segments.

Private clouds are ideal for organizations that need their infrastructure to comply with specific regulatory frameworks or privacy constraints.

BASED IN

NEW YORK CITY METRO

Our public and private cloud platforms are based in a state-of-the-art data center with multi-homed fully redundant connections to multiple bandwidth providers.

Every server rack is equipped with Dual 10 Gbit uplinks, allowing us to provide 1 Gbps network interfaces to every server.

ServerMania' networks are optimized for low-latency connectivity across the US, Europe, and Asia.

The platform is protected at the edge of its internal network by hardware firewalls, ensuring that your servers are protected from the worst of online crime.

WHY CHOOSE

SERVERMANIA?

Most cloud platforms throw users in at the deep end: providing cloud servers, but no support when things go wrong. The ServerMania cloud is different.

World Class Support

We offer first-class support to all our server hosting clients, and that includes users of our cloud platforms. If you experience issues with cloud servers, our North American support team is here to help. Every customer benefits from guaranteed access to a team of expert support professionals with an average response time of 15 minutes, day or night, every day of the year.

You can contact us however you feel comfortable: submit a ticket to our online support system, email us, talk to our customer support team over live chat, or pick up the phone.

Reliability, Guaranteed

Our cloud platforms are engineered for incredible reliability and stability. Every aspect of our public and private cloud platforms are multiply redundant: servers, power, storage, network connections — all have redundant fail-over systems ready to take over the instant a problem is detected.

ServerMania management services are available to both public and private cloud users.

Since 2002, ServerMania has built, hosted, and managed infrastructure solutions for thousands of businesses. Some of our customers prefer to focus on their business, not on managing their servers. Our managed service plans allow public and private cloud customers to benefit from the expertise of our experienced team.

We provide two tiers of managed services: Essential and Empowered.

ESSENTIAL SERVER MANAGEMENT

Our Essential linux server management package includes 24x7x365 server monitoring with guaranteed human intervention in under 15 minutes. Our server operations team will monitor common and user defined ports for connectivity. In the event of a report from our custom monitoring platform of a service outage, our server administrators will follow your instructions precisely to ensure service is restored as quickly as possible.

EMPOWERED SERVER MANAGEMENT

Get complete peace of mind with our Empowered linux server management plan. Including proactive monitoring, security management, and unlimited support requests, this is the perfect choice for businesses looking for a comprehensive and experienced linux server management team.

We're here 24x7 to ensure flawless performance and reliability for your servers.

CHOOSE SERVERMANIA

Our cloud platforms combine technological excellence with dedicated service and support. We built the ServerMania Cloud for small and medium businesses, and we're committed to helping cloud server customers use our technology to achieve their goals.

A leader in web hosting solutions since 2002.
